

Centos7 安装 squid

1. Squid 安装

```
$> yum install -y squid
```

2. 配置 squid

```
$> vi /etc/squid/squid.conf

...

acl proxy_net (ip/class)
acl proxy_net src 127.0.0.1/32
acl proxy_net src 1.2.3.4/24
* proxy_net proxy_net , IP 127.0.0.1, 1.2.3.4 允许访问
...

#ACL规则
http_access proxy_net proxy_net
http_access allow proxy_net
http_access deny all
* proxy_net proxy_net 允许访问
...

#端口设置
http_port 8080

#缓存设置
cache_dir ufs /dev/shm/squid 100 5 10

#核心转储设置
coredump_dir /dev/shm/squid

#刷新模式设置
refresh_pattern . 5 20% 360
```

#5 20% 360 .

3. 100 100

```
$> systemctl enable squid --now
```

4. 100 10 10

1. /var/spool/squid 100M 1 5 , 2

10 10

2. 1 16 , 2 256

3. 100 10 10 10

```
$> ls -l /var/spool/squid/  
/var/spool/squid/00  
/var/spool/squid/00/00  
/var/spool/squid/00/01  
/var/spool/squid/00/02  
/var/spool/squid/00/03  
...  
/var/spool/squid/00/09  
/var/spool/squid/01  
/var/spool/squid/01/00  
/var/spool/squid/01/01  
/var/spool/squid/01/02  
/var/spool/squid/01/03  
...  
/var/spool/squid/01/09
```
