

webalizer 설치하기

1. 패키지 설치하기

```
$> yum install -y gd-devel png-devel
```

2. webalizer 설치하기

```
$> tar xvf webalizer-2.23-05.tgz
$> ./configure --prefix=/usr/local/webalizer --with-language=korean
$> make; make install
$> cd /usr/local/webalizer/etc
$> cp -a webalizer.conf.sample webalizer.conf
```

3. 설정하기

```
$> vi webalizer.conf
LogFile      /usr/local/apache2/logs/access_log
OutputDir    /home/test/public_html/
Incremental   yes
IncrementalName  webalizer.current
ReportTitle  test Web Analyzer DEMO!
HostName     localhost
```

* 참조로 OutputDir은 아파치의 Document Root로 설정된 하위에 위 패스와 동일하게 만들어줘야 한다

4. 실행

```
$> /usr/local/webalizer/bin/webalizer -c /usr/local/webalizer/etc/webalizer.conf > /var/log/webalizer.log
```
